PROJECT REPORT

SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

NAME - KASHISH HASANI
REG NO. - 25BCE11020
BRANCH - CSE CORE
COURSE CODE - CSE0001
YEAR - 2026-27
DATE - 29-03-26

OVERVIEW

The project is designed to help learners achieve a strong foundation in Digital Literacy through five sequential and practical tasks. The first of these tasks is creating an Infographic which raises the student's awareness of Digital Literacy and Safe Online Practices. Next, learners will learn to build a Professional Digital Presence, which includes learning about Digital Tools and how to build/maintain a Responsible Digital Identity.

In addition to Digital Literacy and Digital Presence, the curriculum includes Digital Tools for effective Communication and Learning. Learners will become adept at managing a Digital Environment, which will help them become efficient and organized. They will also learn to develop Formal Communication Skills through the creation of Professional Business Emails, which includes Email Etiquette.

Finally, learners will learn to be aware of Cyber Crime and its risks, which includes learning about common Online Threats and how to avoid them.

Digital Literacy, Digital Communication, and Digital Safety are all aspects of Digital Technology, and teaching them helps learners become responsible, confident, and effective users of Digital Technology for academic and professional purposes.

TASK-1

For this task, I created an infographic using Canva because it has an accessible drag-and-drop system, as well as numerous templates, icons, and design elements available for use. These features helped me arrange my content into a cohesive and visually pleasing layout.

The infographics I have created are mainly about digital literacy, highlighting the significance of digital literacy and safe practices while accessing the Internet. The infographic outlines essential aspects of protecting information, creating secure passwords, and recognizing threats on the Internet. The infographic has been divided into sections, displaying short points and images that will make it easy for viewers to absorb the information they are looking for without difficulty.

One of the difficulties that I had when developing this infographic was attempting to fit all the relevant information onto one page without overcrowding the design with content. However, I enjoyed exploring how I could combine visual elements and layout concepts to develop a creative, interesting, and visually balanced infographic.

In addition, this Task has taught me how to effectively organize information in an orderly, clear and precise fashion; It has also improved my ability to create new ideas visually. Overall, the experience was both educational and enjoyable; allowing me to obtain knowledge about the subject matter and the process of creating a design.

TASK-2

In this task, I developed a more professional presence on the Internet through LinkedIn and GitHub. These are both popular platforms used as a way to display skills, accomplishments, and academic work used in an organized manner.

The purpose of creating these profiles was to provide me with an opportunity to create a professional online identity and to develop an understanding of how digital profiles can be used for growth both academically and professionally. In addition, I added the most basic information to my profiles, such as my formal education, skills, and hobbies so they would be seen as informative and give me a good professional appearance. Therefore, I have recognized there is value in continuing to keep an updated and positive online presence.

Going into the future. I intend to use these sites as a way to continue adding new skills, accomplishments, and projects as well as to network with others, investigate opportunities, and allow for my continued growth as a professional.

One of the most difficult aspects of this task was determining what content I should include on my profiles to make them effective. However, it has also been fascinating to research how these sites display information to its users in a structured manner.

TASK-3

This task showcases practical hands-on experience with beginner-level coding challenges and digital literacy collaboration using Google Workspace tools.

Part A focuses on coding practice. I chose a beginner-friendly platform, Hacker Rank, and completed a challenge. I took a screenshot of my progress, including any score or badge awarded, and saved all materials in the task-3-platforms directory for easy access and verification.

Part B centers on Google Workspace collaboration. I created a Google Form titled “Digital Literacy Awareness Quiz” with exactly five questions. The form includes at least one multiple-choice question and one short-answer question to ensure a variety of response types. I connected the form’s responses to a Google Sheet for real-time viewing and analysis. I shared the form link in the project README to allow quick access. Screenshots of both the form and the linked response sheet are in the task-3-platforms repository as evidence.

Overall, this project improved my problem-solving skills on coding platforms, reinforced my understanding of basic programming concepts, such as input handling and simple algorithms, and strengthened my skills.

TASK-4

I completed two scenarios to learn how to professionally communicate via email: one to apply for an internship, and one as a more formal example. These emails had to maintain clarity, structure and use a formal or business-like tone in order to be effective.

I learned a lot from this instructional exercise, especially about key components of email communication which are: establishing a clear subject line, addressing the email properly, creating well-organized content, and closing with a polite remark. In addition, I learned the importance of tone and word choice in creating a positive image of myself as the sender of the email.

In Part B, I created a checklist for responsible communication, which included important do’s and don’ts such as using formal language, avoiding unnecessary abbreviations, proofreading emails, and maintaining respect in all interactions.

The major takeaway from the entire task was that professional email communication creates an image of credibility, as well as reflects attention and detail. Thus, I feel more confident in my abilities to effectively communicate in formal settings and professionally.

TASK - 5

In this task, I researched a type of cybercrime known as phishing, where an attacker will try to trick you into giving them your sensitive information (i.e., passwords, bank account numbers, or one-time passwords) by pretending to be a legitimate organization. I looked at a real case involving a college student named Rohan who fell for a phishing email that looked like it was from his bank. Rohan clicked on a link in the email and provided his credentials, which allowed the attacker to access Rohan's bank account and perform unauthorized transactions.

What I find most astonishing is how readily cybercriminals can produce identical copies of official websites, which can convince people, even when they typically exercise caution, to fall victim to their schemes. It has made me more aware of the reality that anyone can become a victim of phishing, regardless of how knowledgeable and educated they are.

In Part B, I created a “Stay Safe Online” checklist that includes practical steps such as avoiding suspicious links, not sharing OTPs, verifying sources, and protecting personal information.

One thing I will change is that I will verify email and link credibility before entering any sensitive information into sites or applications, regardless of how trustworthy or credible they may seem. This exercise has greatly enhanced my knowledge of online safety and demonstrates the necessity of being vigilant while participating in online activities.

CONCLUSION

This project helped me understand the importance of digital literacy in today's world. Through various tasks, I learned how to create visual content, communicate professionally, and maintain a responsible digital presence. I also developed awareness about cybercrimes such as phishing and ways to stay safe online.

Overall, this project enhanced my creativity, communication, and digital skills. It has made me more confident in using technology and more cautious while interacting online. These skills will be valuable in both my academic and professional life.

REFRENCES

- Canva- *Design and infographic tool*.
- Google Docs- *Document creation and formatting tool*.
- LinkedIn- *Professional networking and profile building platform*.
- GitHub- *Platform for showcasing projects and portfolios*.
- National Cyber Crime Portal- *Cybercrime reporting and awareness*.
- General web resources on digital literacy and phishing awareness.
